SUMMARY

iOS engineer with fifteen-plus years of mobile design and architecture — shipping production iOS from solo POCs through core-team work on apps with 2M+ DAU inside a 120+ iOS engineer organization at Walmart. Fluent in modern Swift 6.2 concurrency, SwiftUI, Swift Testing, and AI-native delivery using Claude Code, Codex, and GitHub Speckit across the full lifecycle. Equally effective translating a non-technical customer's requirements into working software and evaluating a mature codebase to recommend architectural direction. Most recent role at Walmart was Principal Software Engineer on the iOS checkout platform (2021 – 2026).

EXPERIENCE

Senior iOS Subcontractor

CLEAR February 2026 – Present

- Enhance the user experience of CLEAR's flagship iOS app — the primary focus of the engagement — for a large consumer user base.
- Lead the migration of the production iOS app to Swift 6.2 structured concurrency — async/await, actors, Sendable, and strict concurrency checking — phased across a live codebase.
- Research the flagship iOS codebase with Claude Code; develop architectural proposals.
- Apply Claude Code to day-to-day code assistance and test development; use SwiftUI for all new feature work with test coverage in the Swift Testing framework.
- Maintain and extend the team's Fastlane CI/CD configuration.
- Mentor a six-engineer iOS team on development practices, modern Swift usage, and agentic tooling.

Lead iOS Engineer & Architect (Independent)

FirefighterSpot version 1.0 February 2026 – May 2026

- Delivered a working iOS incident-management prototype for volunteer fire departments from initial customer requirements, owning client, backend, and rollout end-to-end.
- Translated non-technical customer requirements into formal specifications, then implemented a local-first SwiftUI client on Swift 6.2 concurrency that synchronizes across devices.
- Built and operate a Supabase backend; validated with the Swift Testing framework and iterated on-platform with stakeholders after launch.
- Built spec-first using GitHub Speckit for specification generation and Claude Code for implementation, applying AI-assisted development across the full lifecycle.

Principal Software Engineer, iOS Platform / Checkout

Walmart June 2021 – February 2026

- Owned iOS technical strategy for checkout — the highest-stakes flow in a high-volume e-commerce app serving 5–6 million daily active users: architecture evolution, modularization, long-term platform maintainability.
- Architected unidirectional, reactive iOS systems in Swift and Combine with MVVM-style patterns.
- Established automated testing discipline (unit, integration, UI) with XCTest and XCUITest; raised coverage to approximately 85% with a measurable drop in post-release defects.
- Maintained 99.9%+ crash-free sessions; instrumented approximately 90% of core checkout flows and used production signals to drive performance and reliability work.
- Assisted the platform team in 2025 to evaluate Builder.io, connecting Walmart's design library with Figma to generate iOS views; trained 80+ engineers on AI-assisted development workflows; adopted as the standard for new iOS view work.
- Participated in engineering working groups evaluating AI development tools across the 120+ engineer iOS organization — evaluation criteria, hands-on assessments, integration recommendations.
- Helped define and enforce iOS engineering standards across architecture, code quality, performance, security, and testing for the full 120+ iOS engineer organization.
- Collaborated with backend teams on GraphQL schema design and mobile-optimized APIs for checkout and payments.
- Led multi-team delivery and release readiness on a large inner-sourced codebase with frequent production releases.
- Mentored 12+ engineers and built standardized iOS onboarding materials; served as an iOS interview bar-raiser, developing standardized interview materials and interviewing dozens of prospective engineers each year.
- At the request of the engineering accessibility team, taught sessions across the iOS engineering organization on the reasoning behind accessibility and iOS implementation techniques for building accessible apps.

iOS Developer & Data Engineer (concurrent with Walmart)

McGraw-Hill Education (Sharpen) June 2022 – September 2023

- Delivered settings, onboarding, and authentication features for the Sharpen iOS consumer study app within a product-team cadence.
- Integrated five analytics tools into the Sharpen iOS app to support data-informed product decisions.
- Built seven internal tools including an AWS data lake, push notifications, and email/SMS automation.

Senior iOS Engineer (Contractor)

Walmart June 2020 – May 2021

- Core contributor on the small initial team for the complete ground-up rewrite of the Walmart iOS app.
- Established architectural patterns in Swift and Combine that became the foundation for subsequent checkout platform work.

Senior iOS Engineer (Contractor)

WalmartLabs (Sam's Club) April 2017 – May 2020

- Migrated the Sam's Club Objective-C codebase to Swift with uninterrupted service for approximately 2M daily active users.

- Led the refactor of checkout to unidirectional, reactive architecture using RxSwift.
- Drove a significant increase in checkout test coverage during the refactor; prepared the migration path to SwiftUI and Combine.

Senior iOS Engineer (Contractor)

WalmartLabs (ASDA)

April 2014 – April 2017

- Maintained ASDA legacy Objective-C modules across multiple releases over three years for a 500K+ DAU UK grocery app.
- Converted the app's internal architecture to reactive programming using RxSwift; rewrote legacy Objective-C components in Swift.

Independent iOS Developer

Independent iOS Consulting (via Sunetos Inc)

2010 – 2016

- Shipped over 20 iOS apps from inception to the App Store across healthcare, retail, training, real estate, events, music, and market research — including an interactive sales and marketing tool for a high-end real-estate development.
- Developed the MyFactor (BioRx) consumer health app for patients to track and report medically significant events to their care providers, maintained across multiple App Store releases.
- Developed the TherexRx (Clinically Relevant) app for physical therapists to create and prescribe individualized treatment plans, architecting data synchronization across the iOS client, a REST backend, and a Realm-backed distributed database.
- Managed TestFlight distribution and crash remediation directly with client teams.

EDUCATION

B.A. Business Administration

Cedarville College • June 1982

Computer Information Systems emphasis.

SKILLS

- AI-Assisted Development: Claude Code, Codex, GitHub Speckit, Microsoft Copilot, Builder.io, Figma, Agentic Tooling Evaluation, AI-Assisted Code Development, AI-Assisted Testing, Spec-First Development, Cross-Team AI Training and Adoption
- Languages and Frameworks: Swift, Swift 6.2 Concurrency (async/await, actors, Sendable, strict concurrency checking), SwiftUI, UIKit, Objective-C, Combine, RxSwift, SwiftData, Swift Testing, XCTest, XCUITest, Core Data, Realm, MVVM, Kotlin (services)
- Architecture and Delivery: iOS Architecture, Mobile System Design, Unidirectional Reactive Architecture, Modularization, Swift Package Manager, Legacy Refactoring, Code Migration, Engineering Standards, Performance Optimization, Reliability Engineering, Release Management, CI/CD, Fastlane
- Operations and Quality: Production Monitoring, Instrumentation, Observability, Crash Remediation, Root-Cause Analysis, Unit Testing, Integration Testing, UI Testing, TestFlight, App Store Release, Beta Testing, Metrics and Logging
- Backend and Data: RESTful APIs, GraphQL, Supabase, PostgreSQL, AWS, Data Lake, Push Notifications, Data Synchronization, Authentication, Analytics Integration
- Leadership and Process: Technical Leadership, Code Review, Mentorship, Interview Bar-Raiser, Cross-Team Training, Product Collaboration, Design Collaboration, Accessibility Training
