SUMMARY

iOS engineer with fifteen-plus years of mobile design and architecture — shipping production iOS from solo POCs through core-team work on apps with 2M+ DAU inside a 120+ iOS engineer organization at Walmart. Fluent in modern Swift 6.2 concurrency, SwiftUI, Swift Testing, and AI-native delivery using Claude Code, Codex, and GitHub Speckit across the full lifecycle. Equally effective translating a non-technical customer's requirements into working software and evaluating a mature codebase to recommend architectural direction. Most recent role at Walmart was Principal Software Engineer on the iOS checkout platform (2021-2026).

CORE FOCUS AREAS

iOS: Architecture on Current Standards

- Ship new work against Swift 6.2 concurrency (structured concurrency, actors, and strict concurrency checking), SwiftUI with the Observation framework, SwiftUI NavigationStack, SwiftData, and Swift Testing.
- Structure apps for scale using Swift Package Manager modularization — feature modules, shared libraries, dependency injection, and clean dependency graphs.
- Author Architecture Decision Records, PRDs, and engineering standards documents that drive technical direction across mobile organizations.
- Evolve iOS codebases across eras: Objective-C → Swift (Sam's Club, ~2M DAU), RxSwift conversion and Combine preparation (ASDA and Sam's Club), and unidirectional reactive architecture (Sam's Club checkout refactor, Walmart FTE checkout platform).
- Raised automated test coverage to ~85% at Walmart checkout (XCTest / XCUITest); drove earlier significant coverage increases during the Sam's Club checkout refactor; maintained 99.9%+ crash-free sessions with ~90% instrumentation on core checkout flows.
- Defined iOS engineering standards — architecture, code quality, performance, security, and testing — for a 120+ iOS engineer organization.

Process: Engineering Velocity Through Agentic Tooling

- *Walmart internal evaluation and rollout, late 2024 – February 2026.*
Personal experimentation began with Microsoft Copilot and Visual Studio, alongside evaluation of various Xcode plugins. During 2025, led deep evaluation, training, and integration of Builder.io connecting Walmart's design library with Figma to generate and update iOS views. Engineering management mandated Builder.io for all new iOS view work and as an option for updating existing views; adoption was actively growing across the 120+ iOS engineer organization at time of departure. Trained 80+ engineers directly through live sessions, with additional reach via session recordings.
- *FirefighterSpot iOS POC (volunteer fire departments), 2026 – Present.*
Full lifecycle, solo. Built almost exclusively via GitHub Speckit for specification generation and Claude Code for implementation, in SwiftUI + Supabase. Delivered a working prototype from initial idea in 30 days — roughly a 5x improvement in time-to-market versus traditional solo development.
- *CLEAR iOS subcontract, 2026 – Present.*
Use Claude Code and Codex to research the flagship iOS codebase, develop architectural proposals and PRDs, and apply to day-to-day code and test development. Mentor a 6-engineer iOS team on integrating agentic tooling into day-to-day work. Apply agentic tools across planning, specification, implementation, testing, verification, and deployment — as accelerators for engineering judgment, not substitutes for it.

INDUSTRY EXPERIENCE

Engagement	Dates	Industry	Scale / team	Role
CLEAR	2026-	Identity / travel	6-engineer team	Senior iOS engineer Mentor
FirefighterSpot	2026-	Public safety	Solo	Architect Senior iOS engineer
Walmart checkout (ground-up rewrite)	2020-2026	E-commerce	120+ iOS engineers	Principal Team lead Mentor
McGraw-Hill Sharpen	2022-2023	EdTech	Product team	Senior iOS engineer Data engineer
Sam's Club	2017-2020	E-commerce	~2M DAU team	Senior iOS engineer
CRTech TherexRx	2016-2019	Healthcare	Solo	Senior iOS engineer
ASDA	2014-2017	E-commerce	500K+ DAU team	Senior iOS engineer
BioRx MyFactor	2013-2016	Healthcare	Small cross-vendor team	Senior iOS engineer
Various iOS clients	2010-	Real estate, aviation events, training, consumer, trade shows	Solo	Senior iOS engineer

SKILLS

Languages and Frameworks: Swift, Swift 6.2 Concurrency, SwiftUI, Objective-C, Combine, RxSwift, SwiftData, Swift Testing, XCTest, XCUITest, UIKit, Core Data, Realm, MVVM-C

Architecture and Delivery: iOS Architecture, Mobile System Design, Architecture Decision Records, PRD Development, Reactive Programming, Unidirectional Reactive Architecture, Dependency Injection, Modularization, Swift Package Manager, Legacy Refactoring, Code Migration, Engineering Standards, Performance Optimization, Release Management, CI/CD

Backend and Integration: GraphQL, RESTful APIs, Data Modeling, Supabase, AWS, Push Notifications, Analytics Integration

AI-Assisted Development: Claude Code, Codex, GitHub Speckit, Visual Studio, Builder.io, Figma, Agentic Tooling Evaluation, AI-Assisted Code Development, AI-Assisted Testing

Leadership and Process: Technical Leadership, Code Review, Mentorship, Cross-Team Training, Interview and Onboarding Design, Product Collaboration, Engineering Standards, Knowledge Sharing

Testing and Quality: Unit Testing, Integration Testing, UI Testing, TestFlight, App Store Release, Beta Testing, Crash Remediation, Instrumentation, Metrics and Logging, Root-Cause Analysis
