SUMMARY

iOS engineer with fifteen-plus years of mobile design and architecture — shipping production iOS from solo POCs through core-team work on apps with 2M+ DAU inside a 120+ iOS engineer organization at Walmart. Fluent in modern Swift 6.2 concurrency, SwiftUI, Swift Testing, and AI-native delivery using Claude Code, Codex, and GitHub Speckit across the full lifecycle. Equally effective translating a non-technical customer's requirements into working software and evaluating a mature codebase to recommend architectural direction. Most recent role at Walmart was Principal Software Engineer on the iOS checkout platform (2021-2026).

EXPERIENCE

Senior iOS Subcontractor

CLEAR February 2026 – Present

- Built a phased plan to migrate CLEAR's production iOS app to Swift 6.2+ structured concurrency — `async/await`, actors, `Sendable`, and strict concurrency checking — and am implementing it step by step across the codebase.
- Develop architectural proposals and research the flagship iOS codebase with Claude Code and Codex to surface architectural patterns, technical debt, and improvement opportunities.
- Use SwiftUI for recent and new-feature work; write new test coverage with the Swift Testing framework.
- Provide senior level guidance to the six-engineer iOS team as needed.

Solo Architect and Developer

Jason Thomas Architect (FirefighterSpot) January 2026 – Present

- Delivered a working iOS incident-management prototype from initial customer requirements in approximately 30 days — roughly a 5x solo time-to-market improvement versus conventional development.
- Architected the app ground-up on Swift 6.2 concurrency, the Observation framework, SwiftUI `NavigationStack`, and Swift Testing.
- Translated non-technical customer requirements into formal specifications via GitHub Speckit, then implemented in SwiftUI and Supabase driven by Claude Code.
- Integrated the Supabase backend via RESTful APIs including authentication, pagination, error handling, and data modeling.

Principal Software Engineer, iOS Platform / Checkout

Walmart June 2021 – February 2026

- Owned iOS technical strategy for checkout — the highest-stakes flow in the app — serving 5–6 million daily active users: architecture evolution, modularization, and long-term platform maintainability.
- Architected and scaled reactive iOS systems using Swift, Combine, and GraphQL for high-traffic checkout flows serving millions of users.
- Drove real-time performance and reliability initiatives handling traffic spikes and event-driven interactions.
- Led root-cause analysis and long-term fixes across the checkout platform; maintained 99.9%+ crash-free sessions with approximately 90% instrumentation of core checkout flows.
- Established automated testing discipline (unit, integration, UI) with XCTest and XCUITest; raised coverage to approximately 85% with a measurable drop in post-release defects.
- Defined and enforced iOS engineering standards across architecture, performance, security, and testing for the full 120+ iOS engineer organization.
- Collaborated with backend teams on GraphQL schema design and mobile-optimized APIs for checkout and payments; defined contracts and debugged end-to-end issues.
- Owned CI/CD and release readiness for checkout; led multi-team delivery on a large inner-sourced codebase with frequent production releases.
- Mentored 12+ engineers; built standardized iOS interview and onboarding materials.
- Led evaluation, training, and integration of Builder.io during 2025 (design library + Figma to generate iOS views); trained 80+ iOS engineers on AI-assisted development workflows through live sessions plus recordings.

Data Engineer & iOS Developer (concurrent with Walmart)

McGraw-Hill Education (Sharpen) June 2022 – September 2023

- Delivered settings, onboarding, and authentication features for the Sharpen iOS consumer study app within a product-team cadence.
- Built seven internal tools including email/SMS automation, an AWS data lake, and push notifications; integrated five analytics tools into the iOS app.

Senior iOS Engineer (Contractor)

Walmart June 2020 – May 2021

- Core contributor on the small initial team for the complete ground-up rewrite of the Walmart iOS app.
- Established architectural patterns in Swift and Combine that became the foundation for subsequent checkout platform work.

Senior iOS Engineer (Contractor)

WalmartLabs (Sam's Club) April 2017 – May 2020

- Migrated the Sam's Club Objective-C codebase to Swift with uninterrupted service for approximately 2M daily active users.
- Led the refactor of checkout to a unidirectional, reactive architecture using RxSwift; drove a significant increase in checkout test coverage.

Independent iOS Developer (concurrent with WalmartLabs)

Clinically Relevant (TherexRx) October 2016 – April 2019

- Developed the TherexRx iOS app for physical therapists to create and prescribe individualized treatment plans.
- Architected data synchronization between the iOS client, a backend REST API, and a distributed database backed by Realm.

Senior iOS Engineer (Contractor)

WalmartLabs (ASDA) April 2014 – April 2017

- Maintained and extended ASDA Objective-C modules across multiple releases over three years for a 500K+ DAU UK consumer grocery app.
- Converted the app's internal architecture to reactive programming with RxSwift; rewrote legacy Objective-C components in Swift and RxSwift.

Independent iOS Developer

BioRx (MyFactor)

2013 – August 2016

- Developed the MyFactor iOS app enabling consumers to track and report medically significant events to their care providers; delivered multiple App Store releases with ongoing maintenance.

Independent iOS Developer

TRC (TRCShowLeads)

2013 – 2014

- Developed the TRCShowLeads iOS trade-show lead-capture app; managed TestFlight releases and crash remediation with the client technical lead.

Independent iOS Developer

Independent iOS Consulting (via Sunetos Inc)

2010 – 2014

- Shipped 20+ consumer and enterprise iOS apps across aviation events (EAA AirVenture, SUN 'n FUN, WAI, AOPA), training, real estate, healthcare, music, and market research.
- Built reusable iOS frameworks including a quiz/test-bank framework, a dynamic medical-records form generator, and a LineaPRO barcode/magstripe SDK integration; spoke on iOS dependency management and automated testing at 360iDev and CocoaConf.

EDUCATION

B.A. Business Administration

Cedarville College • June 1982

- Computer Information Systems emphasis.

SKILLS

- Languages and Frameworks: Swift, Swift 6.2 Concurrency (async/await, actors, Sendable, strict concurrency checking), Generics, SwiftUI, Objective-C, Combine, RxSwift, SwiftData, Swift Testing, XCTest, XCUITest, UIKit, Core Data, Realm, MVVM, MVVM-C
- Architecture and Delivery: iOS Architecture, Mobile System Design for Large-Scale Consumer Apps, Architecture Decision Records (ADRs), Event-Driven Architecture, Reactive Programming, Unidirectional Reactive Architecture, High-Traffic / High-Availability Systems, Graceful Degradation Under Load, Performance Optimization, Reliability Engineering, Observability and Instrumentation, Root-Cause Analysis, Modularization, Dependency Injection, Swift Package Manager, CocoaPods, Legacy Refactoring, Code Migration, Engineering Standards, Release Management, CI/CD
- Backend and Networking: GraphQL, RESTful APIs, Mobile-Optimized API Design, Pub-Sub / Messaging Middleware (TIBCO Rendezvous), Data Modeling, Data Synchronization, Supabase, AWS, Push Notifications, Analytics Integration
- AI-Assisted Development: Claude Code, Codex, GitHub Speckit, Microsoft Copilot, Builder.io, Figma, Agentic Tooling Evaluation, AI-Assisted Code Development, AI-Assisted Testing
- Leadership and Process: Technical Leadership, Mentorship and Coaching, Cross-Team Training, Knowledge-Sharing Sessions, Conference Speaking, Interview and Onboarding Design, Product and Design Collaboration, Clear Written Communication
- Testing and Quality: Unit Testing, Integration Testing, UI Testing, Swift Testing, TestFlight, App Store Release, Beta Testing, Crash Remediation, Instrumentation, Metrics and Logging, Root-Cause Analysis
