Summary

Experienced software craftsman with a strong background on mobile devices and multitier distributed system design and development.

Rapid problem analysis with the ability to work with clients and end users in developing and refining requirements. Good grasp of how each piece fits in with client's overall goals and needs. Experienced and comfortable with agile development methods. Ability to learn and integrate new development techniques, tools, and skills quickly.

Project Experience

iPhone musician fan app (current project)

Developing iPhone app for fans of individual musicians. Some key features: Cover Flow style access to current discography; cross links from discography to artist and user supplied videos, cross links from discography to artist blog entries; links to artist's twitter feeds, concert schedules, and other news.

iOS framework to integrate LineaPro SDK with UIWebView (2010)

Developed framework to integrate the SDK for the LineaPRO barcode and magnetic card reader with UIWebView. This allowed the client to use web developers to write iPod Touch specific webpages to access the underlying hardware without the need to write any Objective-C code.

Prototype iPhone applications for local university (2010)

Developed iPhone applications and demonstrations for local university for integration experiments between the iPhone and their backend services. Worked with them to evaluate their needs to help them create their mobile device development roadmap.

Recycling and manufacturing tracking system (2006-2010)

Primary architect and lead developer for a system to support the a major recycling business for a manufacturing client. The system is written in Java using a mixture of open source and proprietary components, using DB2 and Glassfish for the backend.

DoD Humanitarian Aid and Disaster Relief planning system prototype (2006-2007)

Worked as researcher and developer on a prototype Humanitarian Aid and Disaster Relief planning system for the DoD. Developed module that allowed web users to collaboratively build, approve, and publish initial planning documents and briefings. Researched use of semantic web concepts (ontologies, OWL, Protege') in support of the process.

DARPA Software agent research prototype (2004-2005)

Designed and developed Java subsystems for a proof of concept distributed agent system: rule engine subsystem, end-user rule builder GUI, tracking subsystem, other subsystem APIs, and system utilities. Mentored team members in J2EE design, Java patterns, and refactoring. Worked with client representatives in developing roadmap for overall project.

US Navy configurable real time engine data display (2003)

Developed prototype system to provide a user configurable display system for an integrated bridge system for Navy small boats. The system monitors and displays real time data feeds from multiple engines in text or graphics mode.

Development experience

iPhone, iPad, and iOS development	1+ years
JEE, Java Enterprise Edition design and development	11 years
Web Services design and development	5 years
Multitier, distributed systems design and development	15 years
Other mobile systems design and development	4 years
Overall professional development experience	30 years

Selected Language and Tool experience

Mobile: iOS, Android, J2ME, WinCE
Server: WebSphere, Weblogic, Glassfish, JBoss, TIBCO
Database: Oracle, Microsoft SQL Server, DB2, MySQL
Languages: Objective-C, Java, C/C++, Delphi

Work Experience

Sunetos, Inc.	1998-present	Independent software craftsman
ICF International	2006-2010	Software development consultant
Synergy, Inc.	1996-1998	Software design and development
Rotman & Sjoquist	1988-1996	Extensive consulting and programming in a partnership
Cedarville College	1982-1996	Various roles ending with Asst. Dir. of Computer Services
Cedarville College	1985-1994	Adjunct Instructor, computer language courses
Custom development	1980-1988	Custom software development for various businesses.

Education

B.A. Business Administration, Cedarville College, June 1982, GPA 3.5/4.0
Computer Information Systems emphasis
