

Summary

Experienced software craftsman with a strong background on mobile devices and multitier distributed system design and development.

Rapid problem analysis with the ability to work with clients and end users in developing and refining requirements. Good grasp of how each piece fits in with client's overall goals and needs. Experienced and comfortable with agile development methods. Ability to learn and integrate new development techniques, tools, and skills quickly.

Project Experience

Schedule and Information app (Sun 'n Fun 2011)

Developed a universal iPad/iPhone app for a client that includes multiple event schedules, exhibitor information and external links, convention maps and other information for those attending with the ability for attendees to mark favorites.

iOS framework to embed quizzes into training apps (2011)

Developed a framework that allows a client to build a bank of questions, videos, and images that can be integrated into an app, allowing the user to test their understanding of the material.

Certification review app (in development)

Modifying an existing universal training app for a client to use the quiz and test bank framework. Current app has training materials, primarily video, for reviewing for a federal certification. The client's in-house developers will use this app as a model to integrate the quiz framework into their other apps.

iPhone musician fan app (in development)

Developing iPhone app for fans of individual musicians. Some key features: Cover Flow style view of discography; cross links from discography to artist and user supplied videos, artist blog entries, twitter feeds, concert schedules, and other news.

iOS framework to integrate LineaPro SDK with UIWebView (2010)

Developed framework to integrate the SDK for the LineaPRO barcode and magnetic card reader (an attached device) with UIWebView. This allowed the client to use web developers to write iPod Touch specific webpages to access the underlying hardware without the need to write any Objective-C code.

Prototype iPhone applications for local university (2010)

Developed iPhone applications and demonstrations for local university for integration experiments between the iPhone and their backend services. Worked with them to evaluate their needs to help them create their mobile device development roadmap.

Recycling and manufacturing tracking system (2006-2010)

Primary architect and lead developer for a system to support the major recycling business of a manufacturing client. The system is written in Java using a mixture of open source and proprietary components, using DB2 and Glassfish for the backend.

DoD Humanitarian Aid and Disaster Relief planning system prototype (2006-2007)

Worked as researcher and developer on a prototype Humanitarian Aid and Disaster Relief planning system for the DoD. Researched use of semantic web concepts (ontologies, OWL, Protege') in support of the process.

DARPA Software agent research prototype (2004-2005)

Designed and developed Java subsystems for a proof of concept distributed agent system: rule engine subsystem, end-user rule builder GUI, and tracking subsystem. Mentored team members in J2EE design, Java patterns, and refactoring. Worked with client representatives in developing roadmap for overall project.

US Navy configurable real time engine data display (2003)

Developed prototype system to provide a user configurable display system for an integrated bridge system for Navy small boats. The system monitored and displayed real time data feeds from multiple engines in text or graphics mode.

Douglas W. Sjoquist

April 2011

Development experience

iPhone, iPad, and iOS development	2 years
Other mobile systems design and development	4 years
Java Desktop and Enterprise design and development	10+ years
Multitier, distributed systems design and development	20+ years
Overall professional development experience	30+ years

Selected Language and Tool experience

Mobile: iOS, Android, J2ME, WinCE
Server: WebSphere, Weblogic, Glassfish, JBoss, TIBCO
Database: Oracle, Microsoft SQL Server, DB2, MySQL
Languages: Objective-C, Java, C/C++, Delphi

Work Experience

Independent	1998-present	Independent software craftsman
Synergy, Inc.	1996-1998	Software design and development
Rotman & Sjoquist	1988-1996	Extensive consulting and programming in a partnership
Cedarville College	1982-1996	Various roles ending with Asst. Dir. of Computer Services Adjunct Instructor, computer language courses
Independent	1980-1988	Custom software development for various businesses.

Education

B.A. Business Administration, Cedarville College, June 1982
Computer Information Systems emphasis
