SUMMARY

Experienced iOS developer specializing in application architecture and team leadership—from Fortune 1 companies to startups. Proven track record leading teams, mentoring developers, and delivering scalable solutions. Skilled at balancing technical excellence with business objectives, working directly with stakeholders to transform requirements into production-ready implementations.

EXPERIENCE

Principal Software Engineer

Walmart

May 2020 – Present

- Led iOS checkout development for Walmart transaction team, directing technical strategy and feature implementation for high-volume eCommerce platform.
- Mentored 12+ junior and mid-level engineers and developed standardized interview process, screening 75+ candidates and successfully onboarding 20 new hires to scale team capacity.
- Led team in instrumenting 90% of main checkout flows and increasing test coverage from baseline to 85%, significantly improving code quality and system reliability.
- Engineered robust API integration solutions for checkout and payment processing using Swift, GraphQL, and Postman for validation.
- Spearheaded Automated Testing framework implementation using XCTest and XCUITest, maintaining 99.9%+ crash free sessions.
- Coordinated daily code reviews with a 10 member checkout iOS engineering team across dozens of inner sourcing teams making contributions to the checkout codebase using GitHub, ensuring adherence to coding standards, and reducing post-release defects over a 5-year span.

Custom iOS App Development

Independent

September 2010 – Present

- Developed and maintained over 20 custom iOS applications for diverse clients spanning healthcare, real estate, education, and consumer goods industries.
- Delivered specialized solutions including medical infusion tracking, attendee access control systems, conference guides, physical therapist support tools, and childhood learning apps.
- Designed and developed manufacturing tracking system in Java (2006–2012), optimizing production workflows and inventory management.

Data Engineer & iOS Developer

McGraw Hill Education

June 2022 – September 2023

- Integrated five different analytics tools into iOS Sharpen App.
- Developed key features of the iOS Sharpen App including settings, user onboarding, and authentication.
- Implemented and integrated seven different tools for McGraw Hill team, including email and SMS automation, AWS data lake, push notifications.
- Engineered automated testing pipelines using XCTest and Fastlane, achieving 95% test coverage across all iOS Sharpen App modules within 6 months and enabling weekly regression cycles for the McGraw Hill team.

Senior iOS Engineer

WalmartLabs (ASDA, Sam's Club)

April 2014 – May 2020

- Led team in refactoring checkout code to use unidirectional, reactive architecture, modernizing codebase and improving maintainability.
- Increased test coverage from under 50% to over 75%, enhancing code quality and reducing production defects.
- Converted app to use RxSwift and prepared migration to Combine frameworks, ensuring long-term technical sustainability.
- Implemented key eCommerce features, expanding app functionality and improving user experience.
- Engineered and maintained legacy Objective-C modules across multiple ASDA app releases over 3 years, supporting over 500K daily active users.
- Migrated Sam's Club Objective-C code to Swift, ensuring seamless interoperability with Swift components and supporting uninterrupted customer transactions for almost 2 million daily active users.

Independent Java/J2EE contractor

Various industries: DoD, DARPA, Education, Mining, Retail

November 1998 – June 2013

- Designed and developed manufacturing tracking system in Java, optimizing production workflows and inventory management building GUIs with Java Swing and related tools, and building backends using WebSphere, WebLogic, JBoss, and Tomcat.
- Experimented with distributed agent systems for DARPA using rule engine.
- Built workflow-based HR evaluation systems using J2EE, Servlets, JSP, and role-based access control.
- Designed collaborative web-based planning tools for DoD humanitarian/disaster relief operations.
- Developed enterprise data synchronization systems for handheld devices (J2ME, WinCE).

Software Engineer

Synergy Inc/ICFI

May 1996 – November 1998, Dayton, Ohio

- Designed and built several proof of concept logistics systems for USAF research labs (AFRL).

Software developer, adjunct instructor, outside consulting, assistant director of Computer Services
Cedarville College

1982 – 1996

EDUCATION

B.A. Business Administration

Cedarville College • June 1982

- Computer Information Systems emphasis.

SKILLS

iOS architecture and app development

Uni-directional, reactive architecture design and development

Multi-tier, distributed systems design and development

Java Desktop and Enterprise design and development
