SUMMARY

Principal iOS engineer with deep ownership of mobile architecture and delivery for everything from small-team POCs to large-scale consumer applications. Proven track record leading iOS platform strategy, defining engineering standards, and driving multi-team execution from design through release. Experienced partnering with product, design, and backend teams to deliver reliable, scalable solutions that balance technical rigor with business outcomes.

EXPERIENCE

Current iOS Contracting

Independent

January 2026 - Present

- Developing an iOS incident management proof of concept for volunteer fire departments using SwiftUI and Supabase.
- Subcontracting for CLEAR, contributing to their flagship iOS app using SwiftUI and providing senior-level mentorship to their engineering team.

Custom iOS App Development

Independent

September 2010 - Present

- Developed and maintained over 20 custom iOS applications for diverse clients spanning healthcare, real estate, education, and consumer goods industries.
- Presented sessions on automated testing, architecture, and other topics at multiple iOS conferences (360iDev, CocoaConf, local meetups).
- Delivered specialized solutions including medical infusion tracking, attendee access control systems, conference guides, physical therapist support tools, and childhood learning apps.

Principal Software Engineer (iOS Platform / Checkout)

Walmart

May 2020 – February 2026

- Owned iOS checkout platform architecture and delivery for Walmart’s high-volume e-commerce experience, partnering cross-functionally to ship reliable, scalable features at scale.
- Owned iOS technical strategy for checkout, including architecture evolution, modularization, and long-term platform maintainability.
- Led automated testing and accessibility training sessions for engineers across the organization.
- Established comprehensive automated testing (unit, integration, UI) with XCTest/XCUIest, raising coverage to ~85% and reducing post-release defects.
- Led multi-team delivery across a large inner-sourced codebase with frequent production releases.
- Defined and enforced iOS engineering standards for architecture, code quality, performance, security, and testing.
- Architected unidirectional, reactive iOS systems using Swift, Combine, and MVVM-style patterns to improve scalability and developer velocity.
- Collaborated with backend teams on GraphQL schema design and mobile-optimized API integrations for checkout and payments.
- Drove observability and reliability initiatives, instrumenting ~90% of core checkout flows and maintaining 99.9%+ crash-free sessions.
- Owned CI/CD and release readiness practices to ensure build health and safe rollouts.
- Mentored 12+ engineers; led design and code reviews across teams.
- Built standardized iOS interview and onboarding processes, screening 75+ candidates and onboarding 20+ engineers.

Data Engineer & iOS Developer

McGraw-Hill Education

June 2022 - September 2023

- Integrated five analytics tools into iOS Sharpen app.
- Developed key features of the iOS Sharpen app including settings, user onboarding, and authentication.
- Implemented and integrated seven tools for the McGraw-Hill team, including email and SMS automation, AWS data lake, push notifications.

Senior iOS Engineer

WalmartLabs (ASDA, Sam's Club)

April 2014 - May 2020

- Led team in refactoring checkout code to use unidirectional, reactive architecture, modernizing codebase and improving maintainability.
- Increased test coverage from under 50% to over 75%, enhancing code quality and reducing production defects.
- Converted app to use RxSwift and prepared migration to Combine frameworks, ensuring long-term technical sustainability.
- Implemented key e-commerce features, expanding app functionality and improving user experience.
- Engineered and maintained legacy Objective-C modules across multiple ASDA app releases over 3 years, supporting over 500K daily active users.
- Migrated Sam's Club Objective-C code to Swift, ensuring seamless interoperability with Swift components and supporting uninterrupted customer transactions for almost 2 million daily active users.

Independent Java/J2EE contractor

Various industries: DoD, DARPA, Education, Mining, Retail

November 1998 - June 2013

- Designed and developed a manufacturing tracking system in Java (2006 – 2012), optimizing production workflows and inventory management. Built GUIs using Java Swing and backend systems using WebSphere, WebLogic, JBoss, and Tomcat.
- Experimented with distributed agent systems for DARPA using rule engine.
- Built workflow-based HR evaluation systems using J2EE, Servlets, JSP, and role-based access control.
- Designed collaborative web-based planning tools for DoD humanitarian/disaster relief operations.
- Developed enterprise data synchronization systems for handheld devices (J2ME, WinCE).

Software Engineer

Synergy Inc/ICFI

May 1996 - November 1998, Dayton, Ohio

- Designed and built several proof-of-concept logistics systems for USAF research labs (AFRL).

Software developer, adjunct instructor, outside consulting, assistant director of Computer Services

Cedarville College

1982 - 1996

EDUCATION

B.A. Business Administration

Cedarville College • June 1982

- Computer Information Systems emphasis.

SKILLS

- iOS architecture and app development, Swift, Combine, GraphQL
- Unidirectional, reactive architecture design and development
- Technical presenter for multiple topics in iOS: Testing (TDD, BDD, mocks), application architecture, specialized techniques
- Multi-tier, distributed systems design and development
