AllTrails

Dear Hiring Team at AllTrails,

I am writing to express my interest in the Senior iOS Engineer position at AllTrails. The opportunity to build reliable, high-quality on-trail navigation experiences for a product that millions of people trust outdoors strongly resonates with both my professional background and my personal connection to time spent outside.

Professionally, I bring more than a decade of experience building and owning large-scale native iOS applications where performance, reliability, and user trust are non-negotiable. Most recently, I have led iOS checkout architecture for Walmart's high-volume eCommerce applications, partnering closely with product, design, and backend teams to deliver scalable, maintainable solutions at pace. My work has emphasized production reliability, correctness, observability, and rigorous testing—raising automated test coverage, improving crash-free sessions, and enabling teams to ship confidently and frequently. This background aligns closely with AllTrails' focus on dependable navigation and performance in real-world conditions.

Beyond the technical match, AllTrails' mission genuinely matters to me. I live next to a state park in Ohio and take every opportunity to hike wooded ravines and canoe the lake. I have taken my family camping since my children were babies—both backpacking and RVing—and we have explored many national parks together over the years. I also write outdoor adventure stories for kids and adults, often developing ideas while hiking, which has reinforced my appreciation for tools that quietly and reliably support exploration rather than distract from it. Products like AllTrails become part of the experience itself, and that responsibility is something I take seriously as an engineer.

What excites me most about this role is the chance to apply senior-level iOS expertise to on-trail navigation, offline data, and performance-sensitive features that people depend on in remote environments. I am particularly motivated by teams that value technical excellence, thoughtful collaboration, and long-term ownership, while remaining curious and open to new tools—including responsible, practical use of AI to improve developer productivity and decision-making.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience, perspective, and passion for the outdoors could contribute to AllTrails' continued success.

Sincerely,
Doug Sjoquist
