Franki

Dear Franki Team,

I'm excited to apply for the Staff iOS Engineer role at Franki. My background is in leading iOS platforms at scale while staying deeply hands-on—shaping architecture, shipping features, and raising engineering quality in fast-moving environments. At Walmart, I owned the iOS checkout platform for a high-traffic consumer app used by millions of daily users, including helping lead a full rewrite from first principles in 2020. I was responsible for architectural direction, modularization, performance, testing, and release quality, working closely with product, design, and backend teams to ship reliably and often.

I'm drawn to Franki because it's a product-driven company where mobile experience, performance, and execution matter. I enjoy building clean, scalable Swift code, improving CI/CD and testing workflows, mentoring engineers, and making pragmatic technical decisions that directly impact users.

I thrive in high-ownership teams that move quickly, value strong ideas, and care deeply about what they ship. I'd love the opportunity to help evolve Franki's iOS platform and deliver great experiences to your users.

Best regards,
Doug Sjoquist
