Future

Dear Future Engineering Team,

I am applying for the Software Engineer – iOS role at Future. My career has centered on building high-quality, high-reliability mobile products where the app is the primary customer experience. Future's mission to deliver deeply personal, coach-driven fitness through a seamless iOS and Apple Watch ecosystem strongly aligns with both the type of products I enjoy building and the impact I want my work to have.

I currently serve as a Principal Software Engineer at Walmart, leading iOS Checkout, where I own iOS platform architecture and delivery for one of the highest-volume consumer transaction systems in the world. That role spans technical strategy, system design, and hands-on development across complex, performance-sensitive user flows supporting millions of daily users. I partner closely with product and design to translate evolving business goals into scalable, maintainable, and polished mobile experiences, while ensuring the engineering foundation supports rapid iteration and long-term growth.

My technical background maps closely to this role. I bring extensive experience with Swift and Objective-C, building large UIKit codebases and introducing SwiftUI for new feature development. I have designed unidirectional, reactive mobile architectures focused on performance, clarity, and maintainability, and I have led initiatives around automated testing, CI/CD, and production readiness to keep fast-moving teams shipping confidently. A consistent theme in my work has been balancing speed with craft—shipping often while steadily improving architecture and code health.

Beyond implementation, I operate as a technical leader and collaborative partner. At Walmart, I help define iOS engineering standards, mentor engineers across teams, and lead design and code reviews for business-critical features. I am comfortable working in ambiguous problem spaces, shaping solutions alongside product and design, and making pragmatic tradeoffs informed by real-world usage. I care deeply about building user-centric experiences that feel polished, responsive, and trustworthy—qualities that are essential in a product meant to support daily habits, motivation, and long-term progress.

Future's focus on personalized coaching, integrated mobile and Apple Watch experiences, and continuous product evolution presents the kind of environment where I believe strong mobile engineering can meaningfully shape outcomes. I would welcome the opportunity to contribute my background in large-scale iOS systems, product-focused development, and technical leadership to help advance Future's platform.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my experience could support Future's iOS team.

Sincerely,
Doug Sjoquist
