Twin Health

Dear Twin Health Hiring Team,

I am excited to apply for the Senior Software Engineer (iOS) role at Twin Health. My career has focused on leading mobile platforms that operate at scale, where correctness, reliability, and user trust are essential—qualities that are especially critical in digital health.

I currently serve as a Principal iOS Engineer at Walmart, where I owned the architecture and delivery of the iOS checkout platform for a high-volume consumer application used by millions of daily users. That role required hands-on technical leadership across system design, modularization, performance optimization, testing, CI/CD, and mentoring engineers, while partnering closely with product and backend teams to deliver reliable, user-first experiences.

Twin Health's mission strongly resonates with me. Building mobile systems that integrate real-world signals, drive meaningful outcomes, and improve people's lives is the kind of work I find most motivating. I bring deep experience designing robust iOS architectures in Swift, owning engineering best practices, coaching teams, and taking responsibility for complex technical problems from design through production. I also enjoy learning new technologies quickly and applying them pragmatically—whether that's new platforms, frameworks, or AI-assisted development workflows.

I would welcome the opportunity to help lead Twin Health's iOS engineering efforts, contribute to best-in-class mobile experiences, and support the company's mission to redefine metabolic care through technology.

Thank you for your time and consideration.

Doug Sjoquist
