Valon

Dear Hiring Team,

I am writing to express my interest in joining Valon as a software engineer. I bring decades of experience designing, building, and operating large-scale software systems, with recent focus as a Principal iOS Engineer owning architecture, delivery, and engineering standards for the checkout component for Walmart's high-volume consumer applications.

In my current role at Walmart, I worked with a small team to build a new iOS experience from scratch and have led the iOS checkout platform supporting millions of daily users, with responsibility spanning architecture strategy, modularization, automated testing, CI/CD health, observability, and cross-team execution. I have partnered closely with product, design, and backend teams to deliver reliable, scalable systems while maintaining a strong emphasis on code quality, accessibility, and long-term maintainability. Establishing comprehensive automated testing practices and clear engineering standards has been a consistent theme of my work, resulting in measurable reductions in production defects and improved developer velocity.

Earlier in my career, I worked across a broad range of domains—including education, healthcare, retail, and government—building distributed systems, data pipelines, and client-facing applications in both mobile and enterprise environments. This background has given me a strong appreciation for correctness, security, and operational rigor, particularly in systems that support financially or operationally critical workflows.

Valon's commitment to building dependable software strongly aligns with my own professional values. I am motivated by environments where engineers are trusted with ownership, encouraged to collaborate across disciplines, and expected to balance technical excellence with real business outcomes.

I would welcome the opportunity to discuss how my experience in platform engineering, testing discipline, and large-scale delivery could contribute to Valon's continued growth. Thank you for your time and consideration.

Sincerely,
Douglas W. Sjoquist
