ZenBusiness

Dear Hiring Team,

I am writing to apply for the Staff Software Engineer, iOS role at ZenBusiness. The company's mission to simplify the process of starting and running a business strongly resonates with me, particularly the emphasis on reducing friction and enabling people to focus on what matters most. I have had a consulting and software contracting business for over twenty years, so I understand the challenges facing independent businesses, and I am excited by the opportunity to contribute at a platform level to a product that has clear, tangible impact for entrepreneurs nationwide.

In my current role as Principal Software Engineer at Walmart, I own the iOS checkout platform architecture and delivery for a high-volume consumer application serving millions of users. My responsibilities span technical strategy, modular architecture evolution, multi-team coordination, release readiness, and the definition and enforcement of engineering standards. I work closely with product, design, backend, and Android counterparts to translate business goals into reliable, scalable mobile experiences delivered on a consistent cadence.

I have extensive experience designing and evolving modern iOS architectures using Swift, Combine, MVVM with unidirectional data flow, and reactive patterns. I have partnered directly with backend teams on GraphQL schema design and mobile-optimized integrations, and I have led observability, reliability, and testing initiatives that materially improved release confidence and production stability. Mentorship and cross-team influence are core to my approach; I regularly lead design and code reviews, support developer growth, and drive alignment across distributed contributors.

ZenBusiness's focus on ownership, pragmatic delivery, and high-autonomy collaboration aligns closely with how I operate. I am particularly drawn to the opportunity to shape iOS technical strategy end-to-end while working within a remote, cross-functional team that values clarity, quality, and accountability.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience in iOS platform leadership and large-scale delivery could support ZenBusiness's mobile roadmap and broader mission.

Sincerely,
Doug Sjoquist
