# Douglas W. Sjoquist

dwsjoquist@sunetos.com | 937-725-8126 | linkedin.com/in/dwsjoquist

## SUMMARY

iOS platform engineer with 15+ years shipping consumer-scale mobile systems, including checkout architecture for Walmart's flagship app (5M+ DAU). Owned modular Swift architecture, Swift 6 concurrency, GraphQL integration, and reliability work (99.9%+ crash-free sessions). Partnered with product, design, and backend on trade-offs; used AI-assisted workflows (Claude Code, Codex, Spec Kit) from planning through delivery and trained engineering teams on those practices.

## EXPERIENCE

### Senior iOS Engineer (contractor)

CLEAR | February 2026 – August 2026

- Analyzed the flagship iOS codebase using Claude Code and Codex to surface architectural patterns, technical debt, and improvement opportunities.
- Created and executed a phased plan to migrate the production iOS app to Swift 6 concurrency.
- Maintained and extended the team's Fastlane CI/CD configuration, updating lanes as build-automation needs evolved.
- Collaborated with a six-engineer iOS team on development practices, modern Swift usage, and integrating agentic tooling (Claude Code, Codex) into their day-to-day workflow.

### Lead iOS Engineer & Architect (independent, concurrent project)

Volunteer Fire Department Incident-Management App (v1.0) | February 2026 – May 2026

- Delivered an iOS incident-management app from initial customer requirements through shipped v1.0, owning the client, backend, and rollout end-to-end.
- Built a local-first SwiftUI client with Swift 6 concurrency and a Supabase backend; added Swift Testing coverage.
- Made extensive use of Claude Code, Codex, XcodeBuildMCP, and other AI tools to build out the system.
- Used GitHub Spec Kit to drive spec-first development and Claude Code for implementation, applying agentic tooling across the lifecycle.

### Principal Software Engineer, iOS Platform / Checkout (full-time)

Walmart | June 2021 – February 2026

- Owned iOS technical strategy and shared platform architecture for checkout, including architecture evolution, modularization, and long-term maintainability in Walmart's flagship iOS app serving 5M+ daily active users.
- Architected and scaled reactive iOS systems using Swift, Combine, and GraphQL for high-traffic checkout flows.
- Collaborated with backend teams on GraphQL schema design and mobile-optimized data-access APIs for checkout and payments.
- Collaborated regularly with Walmart's search and discovery teams through the inner-sourcing model, working on features that spanned multiple app modules.
- Explored the Android and web codebases regularly to keep iOS checkout aligned across platforms.
- Drove real-time performance and reliability work during traffic spikes and event-driven checkout interactions; maintained a 99.9%+ crash-free session rate with ~90% of core checkout flows instrumented.
- Established automated testing discipline (unit, integration, UI) with XCTest and XCUITest; raised coverage to ~85% with a measurable drop in post-release defects.
- Launched all new checkout features behind feature flags, running most as A/B experiments that measured customer and business impact. Owned checkout analytics: instrumentation, dashboards, and monitoring through production rollout.
- Led multi-team delivery and release readiness on a large inner-sourced codebase with frequent production releases.
- Defined and championed iOS engineering standards across architecture, performance, security, and testing for Walmart's iOS organization of 120+ engineers across the Walmart, ASDA, and Sam's Club apps.
- Taught sessions across the iOS engineering organization on accessibility principles and implementation techniques.
- Mentored 12+ engineers and built standardized iOS onboarding materials; served as an iOS interview bar-raiser for dozens of prospective engineers annually.
- Assisted the platform team in evaluating and integrating Builder.io, connecting Walmart's design library with Figma to generate and update iOS views. Engineering management adopted it as the standard for new iOS view work.
- Participated in engineering working groups evaluating AI development tools for adoption across the organization; trained 80+ iOS engineers on AI-assisted development workflows through live sessions, with additional engineers onboarded via session recordings.

**iOS Developer (contractor, concurrent with Walmart)**
McGraw-Hill Education (Sharpen) | June 2022 – September 2023

- Delivered settings, onboarding, and authentication features for the Sharpen iOS mobile study app; integrated analytics tools.
- Contributed to the iOS in-app subscription experience using RevenueCat and StoreKit as part of the product team, including paywall and purchase/restore flows.
- Built seven internal tools including email/SMS automation, an AWS data lake, and push notifications for mobile applications.

**Senior iOS Engineer (contractor)**
Walmart | June 2020 – May 2021

- Core contributor on the small initial team for the complete ground-up rewrite of the Walmart iOS app.
- Established architectural patterns in Swift and Combine that became the foundation for subsequent checkout platform work.

**Senior iOS Engineer (contractor)**
WalmartLabs (Sam's Club) | April 2017 – May 2020

- Migrated the Sam's Club Objective-C codebase to Swift with uninterrupted service for ~2M daily active users.
- Led a refactor of checkout to a unidirectional, reactive architecture; drove a significant increase in checkout test coverage.
- Continued reactive architecture conversion using RxSwift; prepared the migration path to SwiftUI and Combine.

**Independent iOS Developer (concurrent with WalmartLabs)**
Clinically Relevant (TherexRx) | October 2016 – April 2019

- Developed the TherexRx iOS app, which allowed physical therapists to create and prescribe individualized exercise and rehab plans.
- Architected data synchronization between the iOS client, a backend API, and a Realm-backed distributed data layer.
- Implemented auto-renewable in-app subscriptions using RevenueCat and StoreKit and secured App Store approval.

**Senior iOS Engineer (contractor)**
WalmartLabs (ASDA) | April 2014 – April 2017

- Converted the ASDA UK iOS app's architecture to reactive programming using RxSwift for 500K+ daily active users.
- Rewrote legacy Objective-C components in Swift and RxSwift; maintained legacy modules across multiple releases.

**Independent iOS Developer (concurrent with WalmartLabs)**
BioRx (MyFactor) | 2013 – 2016

- Developed the MyFactor iOS app enabling patients to track and report medically significant events to their care providers, using Core Data and RESTful APIs.
- Delivered multiple App Store releases with ongoing feature and bug-fix maintenance; coordinated schema compatibility and release timing with a partner vendor’s parallel app.

**Independent Java / J2EE Architect & iOS Developer**
Ivy Gulch LLC | 1998 – 2026

- Shipped 20+ iOS apps (2010 – 2026) across healthcare, aviation events, training, real estate, and consumer domains.
- Architected enterprise Java systems (1998 – 2012) across defense, healthcare, mining/manufacturing, and higher education, including a six-year ERP-integrated quality-management system.

## EDUCATION

B.A. in Business Administration | Cedarville College | June 1982

## SKILLS

**Languages & Frameworks:** Swift, Objective-C, SwiftUI, UIKit, Combine, RxSwift, Swift 6 concurrency (async/await, actors, Sendable, strict concurrency checking), Core Data, Java

**Platform & Architecture:** iOS architecture, MVVM, MVC, unidirectional and reactive architecture, Swift Package Manager modularization, local-first data synchronization, performance optimization, scalability, reliability engineering, accessibility, state management, networking, persistence, authentication flows, checkout and payment flows

**Backend & Data:** GraphQL, REST APIs, JSON, Supabase, AWS, StoreKit, RevenueCat, in-app subscriptions and paywalls

**Testing:** XCTest, XCUITest, Swift Testing, unit, integration, and UI test automation

**Delivery & DevOps:** Fastlane, TestFlight, CI/CD, Git, feature flags, A/B experimentation, App Store release management

**Analytics & Monitoring:** Analytics and telemetry instrumentation, team dashboards, crash-free session monitoring

**AI-Assisted Development:** Claude Code, Codex, GitHub Spec Kit, spec-first development, prompt and context engineering, developer productivity, agentic workflow integration across planning, implementation, testing, and deployment

**Leadership:** Engineering standards, code review, mentorship, onboarding materials, technical training, accessibility training, technical documentation, interview bar-raiser, technical vision and roadmaps, cross-functional collaboration with product management, design, and backend teams
